Lesson 2.6.2: Inverse Converse and Contrapositive Statements | Total points = 12 |

- 1. Conditional: If two lines intersect, then they lie in one plane. ✓
 Inverse: If two lines do not intersect, then they do not lie in one plane. ✓
 Converse: If two lines lie in one plane, then they intersect. ✓
 Contrapositive: If two lines do not lie in one plane, they they do not intersect. ✓
- 2. Conditional: If angles form a linear pair, then their sum is 180°.√
 Inverse: If angles do not form a linear pair, then their sum is not 180°.√
 Converse: If the sum of angles is 180°, then they form a linear pair.√
 Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair.√
- 3. Conditional: If two angles are congruent, they they have the same measure. \checkmark

Inverse: If two angles are not congruent, they they do not have the same measure \checkmark

Converse: If two angles have the same measure, then they are congruent. \checkmark Contrapositive: If two angles do not have the same measure, then they are not congruent. \checkmark

- Conditional: If two lines intersect, then they lie in one plane. ✓
 Inverse: If two lines do not intersect, then they do not lie in one plane. ✓
 Converse: If two lines lie in one plane, then they intersect. ✓
 Contrapositive: If two lines do not lie in one plane, they they do not intersect. ✓
- 2. Conditional: If angles form a linear pair, then their sum is $180^{\circ}.\checkmark$ Inverse: If angles do not form a linear pair, then their sum is not $180^{\circ}.\checkmark$ Converse: If the sum of angles is 180° , then they form a linear pair. \checkmark Contrapositive: If the sum of angles is not 180° , then they do not form a linear pair. \checkmark
- 3. Conditional: If two angles are congruent, they they have the same measure. \checkmark

Inverse: If two angles are not congruent, they they do not have the same measure \checkmark

Converse: If two angles have the same measure, then they are congruent. \checkmark Contrapositive: If two angles do not have the same measure, then they are not congruent. \checkmark

Lesson 2.6.2: Inverse Converse and Contrapositive Statements | Total points = 12 |

- Conditional: If two lines intersect, then they lie in one plane. ✓
 Inverse: If two lines do not intersect, then they do not lie in one plane. ✓
 Converse: If two lines lie in one plane, then they intersect. ✓
 Contrapositive: If two lines do not lie in one plane, they they do not intersect. ✓
- 2. Conditional: If angles form a linear pair, then their sum is 180°. ✓ Inverse: If angles do not form a linear pair, then their sum is not 180°. ✓ Converse: If the sum of angles is 180°, then they form a linear pair. ✓ Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair. ✓
- 3. Conditional: If two angles are congruent, they they have the same measure. \checkmark

Inverse: If two angles are not congruent, they they do not have the same measure. \checkmark

Converse: If two angles have the same measure, then they are congruent. \checkmark Contrapositive: If two angles do not have the same measure, then they are not congruent. \checkmark

- Conditional: If two lines intersect, then they lie in one plane. ✓
 Inverse: If two lines do not intersect, then they do not lie in one plane. ✓
 Converse: If two lines lie in one plane, then they intersect. ✓
 Contrapositive: If two lines do not lie in one plane, they they do not intersect. ✓
- 2. Conditional: If angles form a linear pair, then their sum is 180°. ✓ Inverse: If angles do not form a linear pair, then their sum is not 180°. ✓ Converse: If the sum of angles is 180°, then they form a linear pair. ✓ Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair. ✓
- 3. Conditional: If two angles are congruent, they they have the same measure. \checkmark

Inverse: If two angles are not congruent, they they do not have the same measure. \checkmark

Converse: If two angles have the same measure, then they are congruent. \checkmark Contrapositive: If two angles do not have the same measure, then they are not congruent. \checkmark

Lesson 2.6.2: Inverse Converse and Contrapositive Statements Total points = 12

- L. Conditional: If two lines intersect, then they lie in one plane. Inverse: If two lines do not intersect, then they do not lie in one plane. Converse: If two lines lie in one plane, then they intersect. Contrapositive: If two lines do not lie in one plane, they they do not intersect.
- 2. Conditional: If angles form a linear pair, then their sum is 180°. Inverse: If angles do not form a linear pair, then their sum is not 180°. Converse: If the sum of angles is 180°, then they form a linear pair. Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair.
- 3. Conditional: If two angles are congruent, they they have the same measure.√

Inverse: If two angles are not congruent, they they do not have the same measure. \checkmark

Converse: If two angles have the same measure, then they are congruent. Contrapositive: If two angles do not have the same measure, then they are not congruent.

- L. Conditional: If two lines intersect, then they lie in one plane. Inverse: If two lines do not intersect, then they do not lie in one plane. Converse: If two lines lie in one plane, then they intersect. Contrapositive: If two lines do not lie in one plane, they they do not intersect.
- 2. Conditional: If angles form a linear pair, then their sum is 180°. Inverse: If angles do not form a linear pair, then their sum is not 180°. Converse: If the sum of angles is 180°, then they form a linear pair. Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair.
- 3. Conditional: If two angles are congruent, they they have the same measure.✓

Inverse: If two angles are not congruent, they they do not have the same

Converse: If two angles have the same measure, then they are congruent. Contrapositive: If two angles do not have the same measure, then they are not congruent.

Lesson 2.6.2: Inverse Converse and Contrapositive Statements | Total points = 12 |

- 1. Conditional: If two lines intersect, then they lie in one plane. Inverse: If two lines do not intersect, then they do not lie in one plane. Converse: If two lines lie in one plane, then they intersect.
- 2. Conditional: If angles form a linear pair, then their sum is 180°. Inverse: If angles do not form a linear pair, then their sum is not 180°. Converse: If the sum of angles is 180°, then they form a linear pair. Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair.
- $\ _{3}.$ Conditional: If two angles are congruent, they they have the same measure. \checkmark

Inverse: If two angles are not congruent, they they do not have the same measure.

Converse: If two angles have the same measure, then they are congruent. Contrapositive: If two angles do not have the same measure, then they are not congruent.

Lesson 2.6.2: Inverse Converse and Contrapositive Statements | Total points = 12 |

- 1. Conditional: If two lines intersect, then they lie in one plane.
 Inverse: If two lines do not intersect, then they do not lie in one plane.
 Converse: If two lines lie in one plane, then they intersect.
 Contrapositive: If two lines do not lie in one plane, they they do not intersect.
- 2. Conditional: If angles form a linear pair, then their sum is 180°. Inverse: If angles do not form a linear pair, then their sum is not 180°. Converse: If the sum of angles is 180°, then they form a linear pair. Contrapositive: If the sum of angles is not 180°, then they do not form a linear pair.
- 3. Conditional: If two angles are congruent, they they have the same

measure.
Inverse: If two angles are not congruent, they they do not have the same measure.

Converse: If two angles have the same measure, then they are congruent. Contrapositive: If two angles do not have the same measure, then they are not congruent.
